# How to import Switch On Literacy into Mind Express

Switch On Literacy is installed differently from other activities that are on the Mind Express Online Grids website.

This Collection has been designed to function as a whole profile. By downloading and installing one compressed profile, all activities in this collection will download together and be organized into appropriate folders.

This tutorial assumes that you have already downloaded the compressed file to your computer.

To install the Switch On Literacy profile, Open Mind Express and click the plus symbol. There may or may not be other profiles already in Mind Express.

In the window that pops up, select Import profile from disk and then locate the file you downloaded to your computer and click OPEN

When the green import button appears, click IMPORT, then wait for this large file to import.

Once the process is completed, the profile will appear on your main screen and you can open and use it.

To explore what is in this collection, start by opening the directions file.

Switch On Literacy will work as a full free demo for 30 days before purchasing.
